KM=18 uM for GABA,
KM=28 uM for beta-alanine;
KM=540 uM for taurine;
KM=540 uM for taurine;
THESTURAR LOCATION: Integral membrane protein.
TISSUB SPECIFICITY: Brain, 11ver and kidney.
DEVELOPMENTAL STAGE: Abundant in neonatal brain but not in adult
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Probom; PD000448; Na/ntran symport; 1.

Proc. Natl. Acad. Sci. U.S.A. 99:16899-16903 (2002).
-!- PUNCTION: Terminates the action of GABA by its high affinity sodium-dependent reuptake into presynaptic terminals. Can also transport beta-alanine and taurine.

Cloning of two novel high affinity GABA transporters from trat brain."; J. Blol. Chem. 267:21098-11104(1992).

-I. FUNCTION: Terminates the action of GABA by its high affinity sodium-dependent reuptake into presymaptic terminals.
-I. SUBCELLULAR LOCATION: Integral membrane protein.
-I. SUBCELCITY: Brain, retina, and peripheral tissues.
-I. SIMILARITY: Belongs to the sodium:neurotransmitter symporter (SNF)

Neurochem. 64:977-984(1995).
-I- FUNCTION: Transports betaine and GABA. May have a role in regulation of GABAergic transmission in the brain through the regulation of GABA into presynaptic terminals, as well as in osmotic
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       -1- SUBUNIT: Interacts with LIN7C (By similarity).
-1- SUBCELDUAR LOCATION: Integral membrane protein.
-1- ISBUE SPECIFICITY: Liver, heart, skeletal muscle, placenta, and a widespread distribution in the brain.
-1- SIMILARITY: Belongs to the sodium:neurotransmitter symporter (SNF)

J. Biol. Chem. 267:17491-17493(1992).

-!- FUNCTION: Transports betaine and GABA. May have a role in requlation of GABA ergot transmission in the brain through the requlation of GABA into presynaptic terminals, as well as in osmotic regulation (By similarity).
-!- SUBGELULIAR LOCATION: Integral membrane protein.
-!- SUBCELULIAR LOCATION: Integral membrane protein.
-!- TISSUB SPECIFICITY: Brain, liver and kidney.
-!- SIMILARITY: Belongs to the sodium:neurotransmitter symporter (SNF)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Eukaryota; Metazoa; Chordata; Craniata; Vertebrata; Euteleostomi;

--- FUNCTION: Transports betaine and GABA. May have a role in regulation of GABAergic transmission in the brain through the reuptake of GABA into presynaptic terminals, as well as in osmotic regulation (By similarity).

--- SUBMNIT: Interacts with LIN7C (By similarity).

--- SUBMNIT: Interacts with LIN7C (By similarity).

--- SUBMRITY: Belongs to the sodium:neurotransmitter symporter (SNF)

                                                                                                     as long as its content is in no way modified and this statement is not
 reuptake of GABA into presynaptic terminals, as well as in osmotic
         regulation (By similarity).
SUBBOUT: Interacts with Lin7C (By similarity).
SUBCELLULAR LOCATION: Integral membrane protein.
SIMILARITY: Belongs to the sodium:neurotransmitter symporter (SNP)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Eukaryota, Metazoa, Chordata, Craniata, Vertebrata, Euteleostomi,

"Molecular characterization of four pharmacologically distinct gamma-
aminobutyric acid transporters in mouse brain.";
-1. Biol. Chem. 268:2106-2112(1993).
-1. FUNCTION: Terminates the action of GABA by its high affinity
sodium-dependent reuptake into presynaptic terminals. Can also
transport beta-alanine and taurine.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Sequence 3, Application US/1078300
Patent No. 684661
GENERAL INOPERATION
TITLE OF INVENTION: ISOLATED HUMAN DRUG-METABOLIZING
TITLE OF INVENTION: PROTEINS, NUCLEIC ACID MOLECTIES ENCODING HUMAN
TITLE OF INVENTION: DRUG-METABOLIZING PROTEINS, AND USES THEREOF
TITLE OF INVENTION: DRUG-METABOLIZING PROTEINS, AND USES THEREOF
TITLE OF INVENTION: UNMEER: US/10/778,300
CURRENT APPLICATION NUMBER: 2004-02-17
NUMBER OF SEQ ID NOS: 4
NUMBER OF SEQ ID NOS: 4
SOFTWARE: FASTSEQ for Windows Version 4.0
Patent No. 6713295
GENERAL INPORMATION:
GENERAL INPORMATION:
TITLE OF INVENTION: ISOLATED HUMAN DRUG-METABOLIZING
TITLE OF INVENTION: PROTEINS, NUCLEIC ACID MOLECULES ENCODING HUMAN
TITLE OF INVENTION: PROTEINS, NUCLEIC ACID MOLECULES ENCODING HUMAN
TITLE OF INVENTION: DRUG-METABOLIZING PROTEINS, AND USES THEREOF
CURRENT APPLICATION NUMBER: US/10/060,311
CURRENT FILING DATE: 202-02-21
NUMBER OF SEQ ID NOS: 4
SOFTWARE: FastSEQ for Windows Version 4.0
SEQ ID NO 3
LENGTH: 288
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               GENERAL INFORMATION:
APPLICANT: WEBSTER, Marion et al.
TITLE OF INVENTION: ISOLATED HUMAN DRUG-METABOLIZING
TITLE OF INVENTION: PROTEINS, NUCLEIC ACID MOLECULES ENCODING HUMAN
TITLE OF INVENTION: DRUG-METABOLIZING PROTEINS,
TITLE OF INVENTION: AND USES THEREOF
FILE REFERENCE: CLOOLIT'S
CURRENT APPLICATION NUMBER: US/09/813,918
CURRENT FILING DATE: 2001-03-22
NUMBER OF SEQ ID NOS: 4
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  ö
